Sketches for a Scarpa Show

On Placing Ourselves in the Field

NICOLÁS DELGADO ÁLCEGA  Let’s start by talking about the work you are doing with MAXXI in Rome. From the material you sent over, I got the sense you were using the Carlo Scarpa archive at the museum to develop a new reading of his work. Is the intent to curate a selection of drawings for a show based on your perspective?

LYNDON NERI  We are working on the fourth in a series of exhibitions that happen every year at MAXXI where a designer is invited to look into the archive of the museum. The primary goal is for the designers to glean from it and present what inspires them to the public.

We started by making it very clear that we wanted to focus on the more architectural material, since we are architects. We quickly narrowed it down to two architects in MAXXI’s archive: Aldo Rossi and Carlo Scarpa. Although Scarpa and Rossi have been widely exhibited—even in just the last decade—we thought there was something original that we could bring to the table through this show. Thankfully the archive was all digitized, since we were not able to travel to it due to COVID-19 restrictions. It wasn’t the same as seeing and touching it physically, but it allowed us to quickly hone in on Scarpa.

Above all, we felt we should look for new revelations in the archive. Our practice deals a lot with Rossi’s notion of the urban artifact: the idea that the act of building is part of the way a city gives continuity to its collective memory. That is important to us, especially in light of what’s been happening here in Shanghai in the last 20 years. But the Rossi archive was focused on different facets of the earlier work.

Soon after looking through everything, we started to hone in on Scarpa’s domestic spaces and the unique way in which he understood the concept of the threshold. The archive has a lot of material that refers to this. We will be looking, of
course, at the built work but also at a lot of the unbuilt houses and other projects that have been perhaps more overlooked.

NDA I’m curious if there is a link between your selection of Scarpa and the interest that you and Rossana Hu have in the concept of the Gesamtkunstwerk. Scarpa had a kind of connection with Josef Hoffmann and other exponents of this tradition. In my opinion, although he is influenced by these ideas, they come through his work differently. From a superficial perspective, Scarpa seems to be more concerned with the incomplete piecing together of fragments. What I perceive as total in his work is a weaving of independent fragments into a total composition, not the idea of designing everything.

LN Yes, yes, that’s a very good point. But it’s the opposite of what we feel Scarpa’s relevance is to our work. What interests us about Carlo Scarpa is this understanding of thresholds. So, the show is not so focused on Gesamtkunstwerk, because we don’t see him as that type of individual. We are working with the way he dealt with tension from a spatial, visual, and tectonic perspective.

I think people often see our work and make the connection to Scarpa on a more superficial level. For example, people look at the Aranya Art Center, where a water duct travels through the main atrium with bronze detailing, and immediately say, “Well that’s natural, Neri&Hu loves Carlo Scarpa and his craftsmanship.” And they miss the point, because what we take from Scarpa is this act of trying to strip elements to their most essential form. We mainly look at Carlo Scarpa as an inspiration from a spatial point of view rather than as a craftsman, even in the details.

NDA The use of an architectural element like the threshold in Scarpa’s work to propose an alternative reading of his oeuvre seems to me closely linked to your perspective as a practitioner. What do you think Rossana and yourself are uniquely equipped to do as architects, in stating a position through a museum exhibit, as opposed to a curator or historian?

LN Well, we are actually working very closely with a curator at MAXXI, Domitilla Dardi. It has been a very fruitful collaboration because we were initially very focused on the narrative of the exhibition, and less concerned with the curatorial consistency of our argument. And Domitilla has been instrumental in bringing that kind of clarity and robustness to the table.
I think what we offer here, Nicolás, is the capacity to do something that is very obviously an interpretation. And we are doing that through the capacity to shape space and materials in a new way within the walls of the museum. We are proposing a reading of the work through a series of spaces that highlight a distinct way in which Scarpa was dealing with the threshold. What you are seeing in this document is a list of some of those: the datum line, the eroded corner, the expanded field, etc.

So, for example, when you enter, the opening room deals with hardware; the pulling, pushing, and touching involved in the hardware that Scarpa designed to deal with the sense of entry. You then move on to a room that deals with the eroded corner, where we made a sort of chamber to be by yourself. Scarpa made a lot of these moments in his work, where you enter a space that can’t really hold more than one person, where you have to get out to let the next person in.

Ultimately, I think we are proposing alternative ways of reading architectural devices that are very present in Scarpa’s work. This is what we have been looking for through the sketches you are seeing. Hopefully by articulating them spatially in an alternative way, we can all of a sudden make the work more obvious and legible to the audience.

NDA: What are you doing differently from the way Scarpa might have done it?

LN: It’s totally different. I mean, just to give you an example, we are collaborating with the microfiber manufacturer Alcantara to see how we can use their material for the show. And we are approaching it in quite a radical way. We didn’t want to use just fabric, so we will take all of their old catalogs and will splice and stack them to make them into bricks. They’re old catalogs, so they are already part of history. So just like mud, we are going to compress them, make bricks, and then stack them. And then we will take the Alcantara felt itself and use it as grout, which is the most important thing. In a way, it’s about producing something that is closely related to both the sacred and the profane.

We are working with our present reality but bringing to it a certain resonance with Carlo Scarpa. He worked on a number of projects that were not just about precious materials, and he used pretty poor materials to create what I consider to be a new sublime. In Critique of Pure Reason, Kant proposes the idea that pursuing the immensity of possibility is so much better than pursuing the solution. And I think that is a new sublime we read in Scarpa’s work and are looking for.
ourselves: the constant iterative effort to find an alternative way of working with what you have and making it sublime. I think the Gavina Bookstore facade in Bologna is a perfect example of that.

NDA How do you think your interpretation will be received in Italy? I saw in the documents you shared that you will also be bringing the Chinese concept of Zhōngjiān into the exhibit to discuss Scarpa’s understanding of the threshold.

LN It will be good to see. I’m very curious about how people are going to take it. Domitilla already told us it’s going to be quite controversial because there will be two camps. It’s probably a good thing that we are not Italian. We are coming from a Chinese perspective and bringing a different reading of space and threshold that is lodged in our own experience. People might find it amusing because of this. I do think that those who love Scarpa might find our spatial interpretation in the museum to be a watered-down version of his skill as a craftsman. But that’s a risk we are willing to take, because our intent is to show him as much more than a craftsman—as an architect in his own right.

NDA Do you think Scarpa is generally seen otherwise?

LN Scarpa is well-loved by a small group of Italian architects. Even globally, he does enjoy recognition, but I’d say only by a small group. He tends to be seen by many as an interior designer, someone who is focused on composition rather than on the design of the elements that make the composition. The conversation tends to be around his work being proportionally and aesthetically pleasing, not so much on the statements he was making with it.

It must have been hard for him. I can only imagine the struggle that he had to deal with. I believe Gio Ponti and Ettore Sottsass were in their younger days at this same time. They would look at Scarpa and say, “Well, he’s an architect trying to do product design.” The architects would look at him and say, “Well, he’s not really so much of an architect; he’s just an interior designer glorified as an architect.” I mean, in the archive we saw letters of architects just outright dismissing him. And the interior designers looked at him, even in his hometown, and said, “Well, he’s really just a product designer.”

So even though he had joined CIAM and engaged in conversations with Le Corbusier, Marcel Breuer, Louis Kahn, and
Sketches by Lyndon Neum for Transcending Thresholds, an exhibition opening November 2021 at MAXXI in Rome.
many other figures from that time, he was never taken seriously. However, we argue that there were moments through which he was influencing a lot of architects, which should make his work more broadly relevant to our discipline.

NDA I think Scarpa remains quite cryptic for many. I remember as an undergraduate student trying to understand why I was being referred to Scarpa’s work and not being able to extract a larger logic from the moments and details that images relate. Perhaps this was partly because his work particularly requires being seen in person. But I think that’s a big part of the challenge with Scarpa and with comparing him to figures whose work had much clearer manifestos or positions behind them.

One of the things I find interesting about Scarpa now is that he was a person that was reflecting early on about what modernism was in relation to the rest of architectural history and different architectural traditions. And I think his reading was very mature for his moment because it had distance from the dogmatism of the period. If you look at some of the things Scarpa was interested in and looked up to, like Josef Hoffmann and the Vienna Secession, many of them belonged to a much more fertile period of modernism, right? I see Scarpa as someone with an outsider’s perspective to his time.

LN Yes, we are going to be giving a lecture that accompanies the opening of the show, and this is actually something we will deal with in the introduction. Scarpa was in fact caught between the ending of that period of Loos, Hoffmann, and others, and the rise of a more dogmatic and established modernism. Our argument is that, if you have a calling that is “incompatible” with the seemingly established forces of the present, you have to continue doing what you think is right. And we say this because we see it today. There are groups of architects that actually suffer under the plight of a certain dogma, and they will never be recognized, Nicolás. They will never be heard of because it is not within the discourse of academics, for instance.

NDA Is there something autobiographical about this assertion?

LN You know, several people have brought up this question in relation to the show. I don’t think it was our intention, but maybe there are parallels. After we went to Shanghai, it took us a bit longer than some of our peers to enter into the field of discourse and debate that academic institutions create. So, we’d question ourselves and the relevance of what we were

doing. But we ultimately found that you have to stay true to yourself and to the decisions that you think are right. Even though Carlo Scarpa was not without fault, he did that.

NDA Absolutely. You know, I never considered Scarpa a bold architect, but now I find him very bold. I’ve read some of the lectures that he gave in the 1960s where he said something like, “I can’t escape that I was the best student of the best student of the architect of the Monumento a Vittorio Emanuele II in Rome.” No one would admit to being a part of that lineage at that time! I think accepting this as part of who he was, just like Venice might have also been a part of who he was, is quite simple but striking for the discourse that we are used to reading from that period.

I find Scarpa to be a very interesting model right now. For better or worse, we are back to a world of the personal, even in teaching. As Jorge Silvetti discussed in his AIA Topaz Medalion lecture in 2018, personal pedagogy dominates curricula today and makes the idea of a school of thought increasingly difficult to foster in departments. The mania with visiting critics increasingly makes it so that schools represent little other than a diversity of fashionable positions.

I think Scarpa is very attractive in relation to this. He is absolutely personal, but at the same time, deeper readings reveal more. There are relationships between what is biographical and historiographical in his work and between his obsessions and the way they intersected larger issues more broadly relevant to his time. I think this gives his work relevance while also making it accessible to the present situation.

LN I agree. A lot of architects who come to work at our office, especially the Europeans, dismiss Carlo Scarpa very, very fast. But there is a lot in his work that is more broadly relevant to our discipline than what our eyes catch at first sight.

The process that you see in Scarpa’s drawing in the archive, of going over and over five or six schemes to address an issue, is something I appreciate immensely because our practice does it too. Scarpa obsessively goes over and over a very specific issue or condition in a project until he finds the solution that is just right for it. I think practice is ultimately about this. And so many times you try over and over again but miss the mark. You build something, and it is absolutely wrong in proportion or scale. But you still try again the next time.

I find that process kind of interesting, and that’s why today I’m looking closely at Valerio Olgiati’s work and, to a certain extent, Peter Zumthor’s. People don’t understand
Peter Zumthor, and they tag his work as highly personal. I think he's dismissed in academia and even among many of his Swiss peers. There is a kind of concerted effort to make him less relevant than he is. But what he does is really not easy, and it has great value beyond himself.

NDA: It goes back to the fact that academia moves too fast through ideas, particularly as it becomes increasingly detached from a commitment to the practice of architecture. Practice forces you to evaluate architectural positions and strategies a bit more slowly and robustly, because you have to do it at the pace at which buildings allow. If we just think, draw and discuss, we miss that important step where we are forced to evaluate how our ideas fared when they confronted reality. It’s easy for academics in the design curriculum that do not seriously practice to jump between new ideas every half decade and stay afloat in the attention economy. They are unencumbered by the act of building, and the evidence of the work they leave behind is much easier to forget when it begins to reveal cracks and wrinkles.

LN: I want to show you an image here, let me turn this around. Do you see that photograph?

NDA: Yes. Oh, it's ...

LN: That's Melnikov's house photographed by Candida Höfer. Doing work of that nature, being avant-garde—it's so easy today, I would argue. Yes, it's beautiful, and I love the work; the way he takes two circles and splits them to have an eye in the middle. I love the work, don't get me wrong; it's right here in our office. And I'm not saying that it was easy to do in its context. But that's one house that Melnikov was good at. All of the other work is less interesting. And there are a lot of these practices celebrated in academia like that nowadays, practices enjoying what I call their “Melnikov moment.” There's definitely merit in a work like this, but we have to start questioning what value we assign to it as architects.

NDA: That is precisely why Scarpa is interesting right now. The work is not so ... intellectually loud. What attracts me to it now is precisely the fact that it isn't overly rhetorical. I think we are all pretty tired of the verboseness and excess of rhetoric that some of the less interesting postmodernists—Robert Venturi, for one—introduced into architectural discourse. But you see it even if you look at people like Aldo Rossi, how he
Sketches by Lucidio Menni for Torsening Thresholds, an exhibition opening November 2021 at MAXXI in Rome.
rewove architecture's relationship to the city and to history. There is a translation of his rhetorical thinking that comes into architecture too directly. Architecture is a completely different form of cultural expression than writing.

Scarpa feels a lot more accessible right now, maybe because his translation of ideas into buildings is more attuned to what buildings can actually communicate and do.

LN  Yes, interesting. I hear you. And don’t get me wrong, it’s also something we struggle with.

I just presented a project yesterday for a resort. The project is as commercial as commercial can be. And I got so lost in the conceptual rhetoric of the work I was showing that by the time the meeting was over, the client said, “Oh Lyndon, can we … give us two weeks to digest.”

After the presentation Rossana told me, “Lyndon, you were in your own world in that presentation. You were in your own world. You have forgotten that you are designing for a client.” Which was true.

I’m not saying we shouldn’t continue to pursue what we are interested in—what will remain of purely disciplinary concern—but I think the good thing is the built work will force you to deal with what is of today and to reflect on how you can actually make a difference in this world with these interests.

Imagine if we didn’t have the practice to tie us down. The bottom line is that if we don’t deliver value to the world out there—to a client—we won’t get paid. I think ultimately that’s a reality that is often good for us as architects. It balances everything.
